

What the certificate guarantees, and what remains monitored

A recomputable decision contract is not a guarantee of universal world truth.

RECOMPUTED / CONTRACTUAL

- Integrity of committed artifacts
- Snapshot replay against committed state
- Policy obligations in the declared scope
- Semantic-support checks under committed checker IDs

MONITORED / NOT GUARANTEED

- Residual source and world-truth error
- Uncovered deployment strata
- Distribution shift and changing environments
- Fresh-execution drift and diagnostic uncertainty

DECLARED TRUST BOUNDARY
